

XTS Access Tracking Manager™ (ATM) is an automated reporting solution that “plugs” into and extends the value of Citrix® Resource Manager. ATM enables you to mine the wealth of data about your environment that is captured by Citrix, all without any need for data collection agents. This provides you with a powerful, easy-to-use and non-intrusive reporting solution.

It is useful to understand how we **extend the features and enhance the performance of Citrix reporting**. The matrix below shows how ATM features compare to Citrix Resource Manager reporting and building custom Crystal reports.

Product Features	Citrix Resource Manager	Crystal Reports	XTS ATM
