

# XTS Introspect for Citrix XenApp™

## Save Money with Smart Analysis

### INTROSPECT AT A GLANCE

#### Easy-to-Use Interface

Introspect's intuitive report generator makes creating reports a snap, with starter templates and no custom coding.

#### Scalable Analytics Engine

Our analytics engine enables fast report generation based on users, applications, processes and server activities, pulling from unlimited usage history.

#### Automated Scheduling

Introspect reports can be scheduled on an "ad hoc" and recurring basis. Reports can be archived, imported into a portal, and distributed via email in PDF, Excel, HTML or XML format.

#### Flexible OLAP Architecture

Introspect's OLAP architecture provides unparalleled reporting and charting elasticity for multidimensional metric analysis.

#### Fast Installation

Out-of-the-box installation and configuration has you generating reports in minutes with zero impact to your production environment.

**The simplicity of creating useful reports with Introspect is like nothing else on the market.**

Fraser Muir, Development Manager, Queen Margaret University

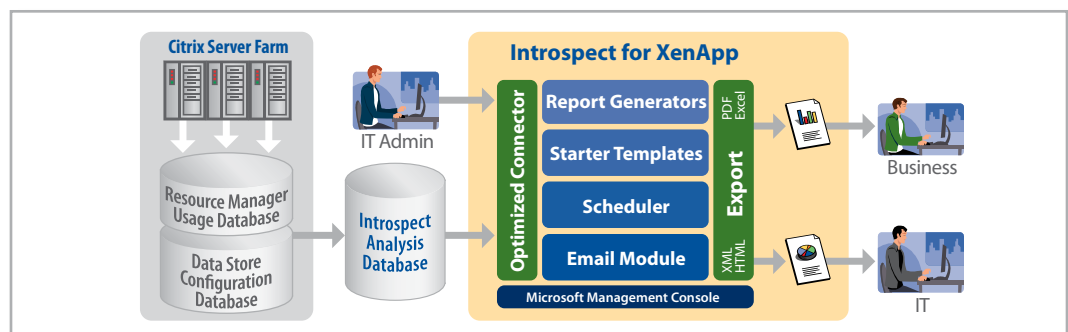

### Optimize Citrix Investment by Analyzing Historical Trends & Configurations

Introspect from XTS delivers the analysis capabilities Citrix enterprise customers need to maximize the value of their Citrix investments. Introspect enables Citrix customers to reduce costs and increase productivity by providing detailed visibility into historical Citrix application usage and configurations over time. With an easy-to-use interface and a flexible, scalable, "out-of-the-box" analytics engine, Introspect delivers advanced business intelligence capabilities for more accurate capacity planning, license analysis, charge-back, application management, auditing and configuration management of Citrix server farms.

### Introspect Extracts and Presents Valuable Usage Information

Introspect is not another monitoring tool. Rather, it complements real-time monitoring solutions, such as Citrix EdgeSite, by providing valuable historical usage statistics that were previously difficult to attain. In addition, Introspect provides the same flexible reporting features for producing useful configuration management reports. These usage and configuration reports provide the unprecedented capability to:

- **Improve Capacity Planning** — Introspect provides previously unavailable insight into your Citrix server farm, enabling you to optimize your hardware resources using meaningful baselines.
- **Advanced Configuration Analysis** — Understanding where applications and hotfixes are deployed, who has access, and associated properties is critical to managing your Citrix server farm. Introspect configuration analysis efficiently documents your Citrix farm and provides automated baseline comparisons for migration projects.
- **Evaluate License Utilization** — Accurately analyze application usage through Introspect's detailed concurrent and unique usage reports, potentially realizing significant cost savings on unused applications.
- **Perform Usage Audits** — Support government and regulatory compliance initiatives with granular Citrix server usage audits. Also useful for ITIL and other governance projects.
- **Implement Chargebacks** — Customizable billing reports let you monetize your XenApp usage by department or by customer.

Introspect leverages Citrix Resource Manager data to help you improve management of your Citrix farm
